

## Performance Improvement Plan - Review

Name:

Date: \_\_\_\_19/11/2020\_\_\_\_

AREA OF FOCUS/OBJECTIVES/ACTIONS	PROGRESS
<p>To be able to articulate the characteristics of and use cases for :</p> <ul style="list-style-type: none"><li>• The Console</li><li>• Data Types</li><li>• Arithmetic Operators</li><li>• String methods</li><li>• Console, Math &amp; Number objects</li><li>• Variables</li><li>• If statements</li><li>• Switch statements</li></ul>	<p><i>As with last week, you've shown you're a lot clearer on explaining what things are and why we need/use them.</i></p> <p><i>You've demonstrated a clear ability to explain how and why something may be used vs what it is from a "textbook" style understanding.</i></p>

Show and write examples for:

- The Console
- Data Types
- Arithmetic Operators
- String methods
- Console, Math & Number objects
- Variables
- If statements
- Switch statements

And be able to use these tools in proposed tasks without the aid of support.

Again, you're showing that you understand how to write data in the console, create variables and manipulate them.

You've also shown a better understanding of switch statements and how to use them effectively.

I've seen less guessing from you when faced with a problem, and more logical approaches to your work.

Demonstrate an ability to problem solve in the same key areas and offer solutions to problems using what has been learnt

Area has certainly improved from last week- you are writing clear comments and notes before you approach work.

I would say that when you are faced with a problem you haven't encountered before, you aren't showing clear signs of being able to solve the problem. With some of the problems from the last task, all the necessary steps you needed to take you had done before; you just weren't putting the pieces together.

To help your problem solving you need to try and focus on separation of concerns. Put your functions together, put your selectors together, put your global variables together. And always be conscious of what information you have available to yourself during the process. Access the variables or update them to support what you're trying to do.
