

Performance Improvement Plan - Review

Name:

Date: ____05/01/2020____

| AREA OF FOCUS/OBJECTIVES/ACTIONS | PROGRESS |
|--|---|
| <p>To be able to articulate the characteristics of and use cases for:</p> <ul style="list-style-type: none">• Functions• Scope• Arrays• Loops• Objects• DOM• DOM Events & Listeners• Requests | <p><i>You can clearly articulate all of the focus areas and understand how all these parts can work together to create different solutions.</i></p> |

Show and write examples for:

- Functions
- Scope
- Arrays
- Loops
- Objects
- DOM
- DOM Events & Listeners
- Requests

And be able to use these tools in proposed tasks without the aid of support.

It's clear you can write out all of the assessed areas.

However, you are still showing some difficulty putting all these things together, particularly with relation scope of functions, event listeners and requests. You don't need to nest everything inside one thing.

For example, there's logic to nest function declarations and event listeners inside the .then function of a fetch request.

Make sure you break down your logic into required steps before you write out code. What happens when a page loads? What happens when a user clicks this button? Not everything is required on page load, it can be broken into sections that make it tidier and more efficient.

Demonstrate an ability to problem solve in the same key areas and offer solutions to problems using what has been learnt

Following on from the above, you've shown great improvement in problem solving. It's clear you can find a workable solution to a problem.

However, you now need to focus on doing this efficiently so that your code is readable, and performance ready.

You've shown you can solve the problem but not that you can solve it to the correct standard. More work needed in this area.
