Performance Improvement Plan - Review

Name:

Date: ____07/12/2020_____

AREA OF FOCUS/OBJECTIVES/ACTIONS	*PROGRESS*
To be able to articulate the characteristics of and use cases for: • Functions • Scope • Arrays • Loops • Objects • DOM • DOM Events & Listeners • Requests	*Progress has been slow in the first week.* *It's clear you understand functions, scope, objects, arrays and when you might use them but you have a basic understanding of all the other areas of focus on this plan and iit's unclear how ingrained that knowledge is.* *Make sure you are referring back to the MDN links to give you a reference to what things do. I would also suggest you look at other resources yourself that put things in more laymen terms.*

Show and write examples for:
    • Functions
    • Scope
    • Arrays
    • Loops
    • Objects
    • DOM
    • DOM Events & Listeners
    • Requests
And be able to use these tools in proposed tasks without the aid of support.
	You've spent the first week planning out your logic flow which is great for the task so there hasn't been many practical examples to review.
	
	Again with functions, scope, arrays and objects is clear you understand how to write them, but not clear if you can use them in different scenarios. Over the next week make sure you are showing practical work of how you might approach different things on the task.

Demonstrate an ability to problem solve in the same key areas and offer solutions to problems using what has been learnt	With regards to the task, you've shown a clear logical approach to how you would approach such projects which great to see. Try to flesh this out more though – break things down into individual tasks and actions, rather than writing down broad statements that include a group of actions. If you approach it this way, you end up with a blueprint and then once you understand the syntax, the code should write itself. Also, please make sure you are completing the weekly diary, it's important that you show how much work you are putting in each week to learning the skills.
